PGT® WinGuard® Aluminum Windows	24
Glossary	35

Live the life you want *where* you want — a custom detailed home that offers you and your family beauty and peace of mind for years to come. That’s the freedom PGT® gives you.

From the day they’re installed and for every moment you own your home, our impact products stand up to outside elements and give you confidence in your environment, your lifestyle, and your investment.

Designed to deliver an impact

INCREASE YOUR HOME VALUE

Most homeowners who install impact doors and windows see significant increases in the value of their homes.

95%

of customers' home value increased — with an average gain of nearly \$34K¹.

LOWER YOUR INSURANCE COSTS

Impact products make your home more efficient and reduce insurance costs.

43%

of homeowners have seen a reduction in their insurance costs¹.

FEEL MORE SAFE AND SECURE

When it comes to guarding against intruders and standing up to the strongest weather conditions, impact products simply perform better.

50%

more resistant to intruders than non-impact glass due to impact glazing.

ENJOY THE PEACE AND QUIET

Impact products give you peace and privacy by minimizing nearby noises like — lawn mowers, traffic, and loud neighbors.

65%

sound and noise reduction when impact windows are installed².

Innovation for a lifetime

PGT® has led the impact industry for more than 40 years by improving safety standards, pushing innovation, and delivering superior performance.

LAMINATED INSULATING GLASS

LAMINATED GLASS

An interlayer is bonded between two panes of glass to form an incredibly strong glass “sandwich” that functions as a single pane, with additional noise-dampening and security benefits.

THE INTERLAYER

The interlayer is a transparent, shatter-resistant plastic membrane that is remarkably tough and flexible, holding the panes of glass firmly in place even if cracked from the outside. The interlayer also protects furniture and decor against fading and sun damage.

THERMOPLASTIC SPACER (TPS)

Our unique TPS spacer and sealant system is air-tight, maintaining the thermal insulation and preventing condensation and seal failures.

INSULATING AIR SPACE*

The layer between the outside pane and inner laminated glass pane acts as a barrier that slows heat transfer and dissipates sound. Argon gas can be inserted for even greater energy efficiency.

UV PERFORMANCE COATING

A molecular bonded coating on the glass surface that reduces heat buildup in your home, saving cooling cost.

OUTSIDE PANE*

Single pane of glass that increases a window’s insulating properties while maintaining clear sightlines.

With more than 7 million units installed, discover what makes us America’s authority on impact windows and doors.

Zero Failures

Over 7 million units installed with zero reported impact failures – an unmatched record for our industry.

Best Performing Laminated Insulating Glass

Zero reported seal failures for 5+ years, compared to industry average of 2% yearly failure rate.

Significant Sound Reduction

Significantly reduces exterior sounds in your home with an STC rating of 30–35 depending on the product. Industry standard is STC 26 for single hung windows.

Energy Efficiency Upgrade

Laminated insulating glass reduces heat and cooling loss in homes no matter the outside conditions. Optional coatings and other upgrades can help achieve a higher level of energy efficiency. Speak to your local dealer for more information.

Hours of Testing

PGT® WinGuard® Aluminum products endure hundreds of hours of testing to meet or exceed Miami-Dade Building Code requirements.

Leader in NOA Certifications

PGT® is a leader in the impact category with 44 Miami-Dade Notices of Acceptance.

Additional Accreditations:

National Fenestration Rating Council
Sound Transmission Class (STC)
Miami-Dade Notice of Acceptance (NOA)
Florida HVHZ Product Approval

*Included with laminated insulating glass packages for highest energy performance. Both laminated and laminated insulating glass packages are available for PGT WinGuard products.

Effortless protection that's always on

Ready to say goodbye to shutters? Installing PGT® impact products is an investment in your home and lifestyle with everyday and long-term rewards. WinGuard® is engineered for performance.

Convenience

PGT® provides effortless impact protection from the moment of installation. Shutters require your presence for timely setup before every weather event.

Effectiveness

A durable interlayer keeps impact glass within the frame even if struck, shielding your home from flying debris.

Value

80-86%

While the initial investment for impact windows is higher than shutters, the ROI for impact windows ranges from 80% to 86%. Shutters max out at around 40%¹.

Comfort

PGT® products allow for natural light while significantly quieting outdoor noise during a storm. Shutters darken your home and offer minimal sound protection.

Service

We're committed to delivering the best service in our industry, making the process from purchase to ownership simple and stress-free.

Freedom

You get the everyday superior performance of PGT® — less noise, more security, and lower energy costs — no matter your location or weather. Shutters are manually removed after every storm.

“

Overall, it's been a good investment. I feel confident in my choices of windows and doors, both for the looks and value of my home.

– James P., Tampa, FL

PGT® WINGUARD® ALUMINUM DOORS

Sliding Glass Doors

These smooth operating doors will add extra security to your home and let natural light into your living room or master bedroom.

Pages 18-21

French Door

Pairing elegance and high functionality, these single or double French doors can be equipped with European-style hardware and is available with matching sidelites.

Pages 23-23

PGT® WINGUARD® ALUMINUM WINDOWS

Single Hung Window

Raised from the bottom with a fixed top half, our single hung window offers ventilation and effortless protection in a traditional style that can be used throughout the home.

Page 26

Horizontal Roller Window

Blending modern style and top-notch protection, this easily operated window is perfect for kitchens, bathrooms, and more.

Page 27

Casement Window Fixed Lite Casement Picture Window

The foldaway handles of these windows prevent interference with your curtains. Pair them beautifully with matching Awning and Picture windows.

Page 28

Awning Window

Designed for use in high spaces, this beautiful-yet-functional window is designed to block rain from entering, while providing outstanding ventilation and light.

Page 29

Fixed Lite Picture Window

A non-operable window that enhances the look of living rooms, kitchens, and master bedrooms with maximum, unobstructed sightlines.

Pages 30-31

Fixed Lite Architectural Window

Our wide selection of unique shapes and styles will help allow natural light, improve security, and enhance your home's beauty and aesthetics.

Pages 32-33

CUSTOMIZED TO YOUR EXACT STYLE AND STANDARDS

Each PGT® WinGuard® Aluminum product is built just for you and can be fully customized to live up to your highly unique design vision — without compromise, down to the last detail.

FRAME COLORS

Powder-coated frames resist chipping, corrosion, and fading. Custom frame colors are also available.

GLOSSARY

Argon Gas — A safe, odorless, colorless, non-toxic, non-flammable inert gas that is commonly used in place of air between the glass panes of an insulated Low-E glass unit to reduce temperature transfer.

Corrosion Resistant — Refers to how well a substance can withstand damage caused by oxidization or other chemical reactions.

Design Pressure — Wind load pressure, expressed in pounds per square foot (psf).

ENERGY STAR® — An independent U.S. government program that establishes a standard set of guidelines to recognize the energy efficiency of various products. ENERGY STAR® guidelines are used in conjunction with a variety of building materials, including windows and patio doors.

Florida Product Approval — A statewide approval system that requires manufacturers to submit testing and engineering data to ensure certain building components meet Florida Building Code standards.

Forced-Entry Resistance — The test methods intended to establish a measure of resistance for window assemblies subjected to attacks, other than by impact.

Impact Resistant — Shatter-resistant glass. When the glass breaks, the shattered pieces will adhere to the interlayer.

Insulating Glass — Window panes separated by an air- or other gas-filled space to reduce heat transfer.

Interlayer — A shatter-resistant plastic membrane sandwiched between two panes of glass.

International Building Code — A model building code developed by the International Code Council that has been adopted throughout most of the United States.

Laminated Glass — Two panes of glass bonded together with a strong, clear interlayer.

Laminated Insulating Glass — Comprised of three panes of glass: two panes bonded together with a strong, clear interlayer and one pane for added insulation.

Large-Missile Impact — Test used on windows and doors in which a 9-lb. 2' x 4' is propelled at a speed of 34 mph onto test subject.

Low-E (Emissivity) Glass — Glass with a transparent, metallic oxide coating applied onto or into a glass surface. The coating typically allows short-wave energy to pass through but reflects long-wave infrared energy, which improves the U-value.

Miami-Dade Notice of Acceptance (NOA) — A certification method controlled by Miami-Dade County that requires products to be tested to the TAS testing protocols.

Monolithic Glass — A single pane of glass cast using one glass thickness.

National Fenestration Rating Council (NFRC) — A non-profit organization that provides energy performance ratings on windows, doors, skylights, and attachment products.

Privacy Glass — Glass that has been made translucent instead of transparent.

Sea Turtle Protection Code — Protects sea turtles along the Florida coastline during nesting season by restricting the amount of light permitted through windows and doors.

Sound Transmission Class (STC) — An integer rating that provides an estimate of the sound insulation performance of an interior building partition (such as a window or door) between indoor spaces. The higher the number, the less sound is transmitted.

Tempered glass — Treated glass that is strengthened by reheating it to just below the melting point and then suddenly cooling it. When shattered, it breaks into small pieces. Approximately four times stronger than standard annealed glass; is required as safety glazing in patio doors, entrance doors, sidelites, and other hazardous locations. It cannot be recut after tempering.

Ultraviolet (UV) — The invisible rays of the spectrum that are outside of the visible spectrum at its short-wavelength violet end. Ultraviolet rays are found in everyday sunlight and can cause fading of paint finishes, carpets, and fabrics.

Window Opening Control Device — A device that limits the opening of a window sash to a predetermined position. The device includes a release mechanism that shall allow the sash to be fully opened and that automatically resets when a window is fully closed.
